Subject: Commitment and Institutional Support for AETERNA-SCW Smart Cables Works Proposal

Dear Members of the Evaluation Panel,

We, the undersigned representative organization, hereby express our **unconditional support** and **firm commitment to participate** in the proposal **AETERNA-SCW (Quantum Subsea Security)**, submitted under the CEF-DIG-2026-SMART-CABLES-WORKS call by the coordinating applicant **AETERNA** (PIC: 865986222).

As a critical stakeholder in European digital sovereignty and infrastructure resilience, we recognize the urgent necessity of securing submarine fiber-optic trunks from physical sabotage, kinetic tampering, and environmental seismic hazards. The AETERNA-SCW project introduces a highly innovative approach by retrofitting existing communication channels with non-intrusive coherent Distributed Acoustic Sensing (DAS) and State of Polarization (SOP) monitoring, combined with ultra-low latency Mojo-accelerated neural signal classification.

Our Commitment to the Project:

- 1. Infrastructure Integration:** We commit to providing technical access to our trans-oceanic landing terminals and telecommunications trunks for the installation of the optical monitoring equipment (WP1).
- 2. Seismic and Acoustic Calibration:** We will collaborate in calibrating the real-time AI signal separators to map acoustic waves, vessel movements, and physical anomalies along the Mediterranean and Black Sea paths (WP2).
- 3. Emergency Apoptosis Testing:** We agree to validate the AIGIS eBPF Sentinel process-containment loops at our SCADA interfaces to ensure immediate (<1ms) traffic rerouting during simulated physical security breaches (WP3).
- 4. Resources & Funding Match:** We confirm that our allocated budget of **€4,500,000.00** will be matched in accordance with the 50% co-funding rules of the CEF Digital instrument, representing a co-funding match of **€2,250,000.00**.

We are fully convinced that the expertise of **AETERNA** in sovereign, zero-entropy software architectures, combined with our operational infrastructure, makes AETERNA-SCW an exemplary project that will materially enhance the security and resilience of the European Union's digital backbone.

Sincerely,
